As primary school students,
how can we protect endangered animals?

Many animals are endangered today since people destroy animals' natural habitats, create pollution and overhunt wild animals. For a species to be considered endangered, they must have lost over 70% of their population. If we don't do anything that can rescue them, the endangered animals will extinct. Although we're primary students, there are still some easy ways to help them in our daily life.

First, we should learn about endangered species in the place we live. In Hong Kong, there are a lot of

interesting animals but some of them are endangered.

Therefore, we should teach our families and friends

about the wonderful wildlife that live near us. The

number of endangered animals in Hong Kong such as

Black-faced Spoonbill, Chinese White Dolphin and Romer's Tree

Frog, is decreasing rapidly due to lack of food and the

loss of habitat. Moreover, we should learn about the products

made from their body parts, such as ivory and fur. Since

they are one of the reasons that why some animals are

endangered, we should never buy these products.

Secondly, it is important to take care of the

environment. There are two types of habitat. They are land

habitat and water habitat. To protect land habitat, we

should encourage people to deal with rubbish properly by

referring to the 3R concept. They are reduce, reuse and recycle. For example, we need to use less paper so that we can save trees. To protect water habitat, we should stop polluting the water. We shouldn't throw the ^(sp) rubbish into the water. About hunting, people hunt animals for meat, skin, fur and rare parts of an animal for money. We should eat less meat and buy less clothings that are made by animals' skins, furs and other parts of animals.

Not only do we need to stop doing the things that are bad to the Earth, but we also need to participate in activities in protecting the environment actively. We can join the tree-planting day since trees are

some animals' habitat. Trees can purify the air so as to reduce air pollution. We can also join other activities like cleaning rubbish on the beach, donating money to the environment protection organisations such as WWF and Greenpeace to help the endangered animals. The money can also be used to save the endangered animals and to teach the children about endangered animals.

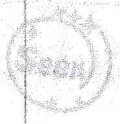

We should cherish the nature. Although not every mean to save endangered animals is easy, we can try our best to protect them. In our own little ways, we can ^{save} ^{help} the animals. Remember to take action today before it is too late.

**As primary school students,
how can we protect endangered animals?**

Many animals become endangered today since people are destroying animals' natural habitats, creating pollution and overhunting wild animals.

That makes animals become endangered so we need to protect them. As a primary school students, we can protect endangered animals in easy ways.

Firstly, we can learn about endangered species in the place we live. In Hong Kong, Black-faced Spoonbill, Chinese White Dolphin, Rome's Tree Frog and so on are endangered. When we know more about these endangered animals, we can tell our friends about

the wonderful wildlife and how to protect them together. Moreover,

We should learn about the products made from endangered species,

such as ivory and fur, and never buy those products again.

Moreover, it is very important to take care of the environment. We

should encourage people to throw rubbish away properly so that

we won't cause land pollution. We can also use the (P) Three R's, which are

reduce, reuse and recycle (P) whenever possible. For example, when you

go out to buy food, you use eco-bags (P) so that you won't

create rubbish with plastic bags. You can also reuse the

eco-bag!

Other than that, we can join activities in protecting

the environment. For example, we can join the beach cleaning

activities to clean rubbish in the sea or on the beach. Then,

sea animals will have a clean habitat to live in. Moreover,

P.6 (D)

**As primary school students,
how can we protect endangered animals?**

Many animals are endangered due to overhunting, pollution and loss of habitats. The loss of habitat means that animals don't have enough food, which may lead to death or even extinction. Once they are gone, we cannot bring them back and it is irreversible like Pandora's Box. As primary school students, how can we protect the endangered animals?

First and foremost, we can learn about endangered species in the place we live. The three most well-known endangered species in Hong Kong are the Romer's Tree Frog, the Black-faced Spoonbill and the Chinese White Dolphin. People hunt them for their fur, meat, rare parts and

skin to make some invaluable products. Some other famous endangered animals

in other countries include elephants. Especially for elephants, people mostly

hunt them for their ivory since they think ivory is alluring. However, we

should never buy those products and endangered animals because it will

cost their lives!

Secondly, how can we take care of the environment? We could just

switch off electric appliances and turn off the water tap when we are

not using them to save electricity. We can bring an eco-friendly bag

to replace plastic bags when we go shopping. We can also execute the

3Rs, stop using one-use utensils, ^{and use energy saving devices} to reduce the pressure of the power

plants.

Last but not least, we can participate or encourage others to take

part in the activities in protecting the environment such as tree-planting

day or cleaning the rubbish at the beach to make animals' habitat

bigger and cleaner again. Besides, we can also donate to animal

charities like WWF and Greenpeace to clean up rubbish. ^{and raise public awareness to environment protection}

Take action today to save the environment before it's too late!

Extinction is forever and irreversible. In our own little ways, we can help

save the animals!
